

## Next steps for Task 3.4

Rolf Krahf

Task 3.4 & 3.5 Meeting, 12 January 2022

# Issues Identified during December Meeting

- Standard data formats
- Decision on metadata catalogue
- PIDs: Issuing PID for raw data, link to other PID type
- AAI: ID management, integration with Umbrella

# Standard Data Formats

- This seem to be a rather broad topic.
- It seem to require a whole new project to tackle this.
- Actually, there are other projects working on it.
- Not sure if we can make a relevant contribution in Task 3.4.

# Decision on Metadata Catalogue

- Surprising that this is still an issue.
- Idea: organize a workshop:
  - present different solutions, at least ICAT and SciCat,
  - highlight strengths and weaknesses of either solutions,
  - try to get practical.
- Depending on the agenda, we could easily add neighboring issues to that.

# Decision on Metadata Catalogue

- Surprising that this is still an issue.
- Idea: organize a workshop:
  - present different solutions, at least ICAT and SciCat,
  - highlight strengths and weaknesses of either solutions,
  - try to get practical.
- Depending on the agenda, we could easily add neighboring issues to that.
- Need to get feedback from DESY and HZDR whether they'd consider this useful, though.

# PIDs: Issuing PID for Raw Data

- Note: PIDs always need to be considered in conjunction with the metadata.
- We have quite a variation of level of integration within the partners.
- Again, idea: organize a workshop:
  - Exchange of experiences and concepts.
  - Invite external partners (B2FIND).
