

Task 3.4 & 3.5 Kickoff Meeting

Rolf Krah, Sudha Padmanabhan

29th September 2021

Task Descriptions

Task 3.4: Coordinate the integration of metadata catalogues to manage the data lifecycle at EU national Photon and Neutron RIs

Based on the roadmap defined in task 3.1 the national sites will deploy the developed standards and processes. The WP will help to coordinate these activities by providing best practices and cross-site support. Technical and user interface related information will be documented and provided as input for WP5 to facilitate training. The coordination process will be continued until the end of the project.

Task 3.5: Integrate metadata catalogue services into EOSC

The different metadata catalogues will be integrated into the PaNOSC federated metadata catalogue and provided as a service on EOSC-hub. Access to metadata catalogues will be facilitated by Umbrella-ID (federated AAI services for Photon and Neutron RIs).

Milestones and Deliverables

Milestones:

M3.1 Meta data catalogue release (month 24)

M3.2 Meta data catalogue as EOSC service (month 30)

Deliverables:

D3.3 Demonstrate ICAT and SciCat released with compatible APIs (DEM, month 30)

D3.4 Material to support training as input for WP5 and WP6 (R, month 31)

Milestones and Deliverables

Milestones:

M3.1 Meta data catalogue release (month 24) ✓

M3.2 Meta data catalogue as EOSC service (month 30)

Deliverables:

D3.3 Demonstrate ICAT and SciCat released with compatible APIs (DEM, month 30)

D3.4 Material to support training as input for WP5 and WP6 (R, month 31)

Discussion

So what shall we do?

Questions we need Clarification on

Questions that we need to gather more input from outside of WP3:

- What is the status of the PaNOSC federated metadata catalogue?
- Does the PaNOSC search API support authentication? If yes, how does it work?
- What kind of input would WP5 and WP6 accept?

Working Plan

- Regular meetings?
- What technology to use for collaborative work?
