Assessment of ExPaNDS Partners with Respect to KPI

Rolf Krahl

Task 3.4 & 3.5 Meeting, 13 October 2021

Motivation for the Assessment

- Task 3.4: help and coordinate activities of ExPaNDS partners to integrate metadata catalogues and manage the data lifecycle.
- Take WP3 KPIs as a target.
- In order to help, we need to understand the problems first.
- We would need to know what keeps partners from advancing and how to help them best.

KPI Survey

- There have been surveys to evaluate the KPIs.
- Check the information we already have first.

$\Rightarrow$ Carlo . . .

What Information Would we Need?

Information we might need from each partner:

- Which KPIs has been achieved?
- Which KPIs does the partner intend to achieve before the end of the project?
- What are the road blockers? Identify up to three issues that hamper the partner most from advancing. Relate these issue to the corresponding KPI.
- What could be done to help? Identify up to three issues where help from ExPaNDS would be the most appreciated.

Goals

What could be the outcome of the assessment?

- If we find common issues that hamper many partners, we could try to do a joint effort.
- If we find a diversity of road blockers, we might organize exchange of experiences: team one partner particularly struggling with one issue with another one having already solved it.

Note: these are just ideas. Other suggestions welcome!

Discussion & Next Steps

- Discussion: Do you agree with what has been presented? Any other suggestions?
- How would we gather the information? Do another survey?
- What are the next steps?
- . . .
